

E-5 LIQUID C.I.P. CLEANER

This product is a heavy duty liquid chlorinated circulation cleaner for "in place" cleaning of equipment on dairy farms and in food plants. It is specially formulated for effective removal of protein and butter fats in pipelines and bulk tanks.

DIRECTIONS:

Cleaning Bulk Tanks and Pipelines: Rinse tanks and lines thoroughly with clean water. Dilute product using 2-3 ml/L (1/3 – 1/2 oz. per gallon) of water at 60 °C - 70 °C. More product may be necessary in hard water areas. Circulate the solution in the tank and through the pipeline system for 8-12 minutes. The entire system should be acidised on a regular basis after washing procedure, to prevent milk stone build-up. Just before processing, sanitize tank and pipelines with 200 ppm of chlorine solution or 12.5 ppm of iodine solution.

For Commercial Use Only
