

FARM PIPELINE CLEANER

This product is a concentrated heavy duty chlorinated low-foaming bulk tank and pipeline cleaner designed to give excellent cleaning results in all water conditions. It will remove protein and butter fats from stainless steel and plastic equipment very effectively and thoroughly. This product is specially formulated for use in dairies and on dairy farms.

DIRECTIONS:

Rinse the system with cold water to remove all milk from pipelines and bulk tanks. Make a wash- up solution of 2 grams to 1 litre (1/3 oz./gallon) of water; more may be required in hard water areas. Best results are obtained when water is at least 60 °C to 70 °C . Circulate wash solution for 8-12 minutes, while maintaining temperature. Drain the system and rinse with warm water. Follow up with an acid product to descale tanks and pipelines. Just prior to use, circulate with a chlorine sanitiser solution.

For Commercial Use Only
