

GLYCERINE

This product is designed to be used full strength or as an additive to make cows' teats and udders more supple and soft. It helps protect teats and udders from chafing, skin rashes and irritation.

Glycerine may also be used as a lubricant, skin moisturizer, and as an antifreeze when diluted with water.

DIRECTIONS:

When using at full strength, apply by hand - rubbing and massaging into teats and udders. For use as an additive, mix 7-12 ml/L (1-1½ oz/gallon) into any Chlorhexidine or Iodine teat dip or udder wash.

For Commercial Use Only
