

# Gold Coat Protection

Gold Coat Protection, is a concentrated drying agent fortified with Carnuba Wax for advanced surface protection, improved shine and water repellency on automotive surfaces.

Gold Coat Protection is applied after the wash and immediately before the final rinse. It chemically bonds to the vehicle surface, producing better water beading and breaking, resulting in improved blower efficiency and a spot free finish.

It is a brilliant yellow colour even when diluted. It may be used with foaming spray nozzles for added show.

## **DIRECTIONS:**

Gold Coat Protection may be diluted up to 300 parts with water. For extra wax protection and faster drying, use at a higher concentration for desired results.

## **FOR COMMERCIAL USE**
