

## K-24 G GERMICIDAL TEAT DIP

This is an iodine product used as an aid in controlling mastitis. DIN: 00504807

**ACTIVE INGREDIENTS:** 10% Nonyl-Phenoxy-Polyethoxy Ethanol-Iodine complex (providing 1% titratable Iodine)

### DIRECTIONS:

Immediately after each cow is milked, dip the teats in undiluted teat dip. When a cow is being dried off, continue the teat dipping once a day for 1-2 weeks. The teat dip solution in a dip cup should be changed if it becomes visibly dirty, if sediment is introduced, or if brown color fades very noticeably.

**NOTE:** Do not use for cleaning and/or sanitizing milking equipment. Do not dilute! Product is ready to use. It contains a built-in colour indicator. As long as the iodine color remains, its germ- killing power is working. Contains Glycerine.

For Commercial Use Only
