

T30 CHLORINE SANITIZER

This product is a heavy duty concentrated granular chlorine sanitiser specially designed for sanitising milking equipment and utensils on dairy farms and in dairy plants. It has excellent chlorine stability for long periods of storage and dissolves rapidly.

ACTIVE INGREDIENTS: Sodium Dichloroisocyanurate (providing 28% available Chlorine)

DIRECTIONS:

Sanitizing pails, cans and other utensils: After milking, flush with potable water. Brush utensils with a good detergent then rinse with potable water. Prepare a 200 ppm solution of product, dip utensils for two minutes then let drain completely. Do not soak overnight.

Milking machines: Flush machine with potable water. Then flush again, using a good C.I.P. cleaner and rinse. Clean all metal parts, then rinse. Make a 100 ppm solution of product and run through lines, then completely drain.

PROPORTIONS FOR USE TABLE:

200 ppm use 30 grams to 45 litres of water

100 ppm use 30 grams to 90 litres of water

For Commercial Use Only
